AQI Insight – Air Quality Monitoring & Intelligence Dashboard

V. Adarsh | 2503A52334 | Batch 12

Problem Statement

Air-quality data is often difficult for ordinary users to interpret because readings are spread across datasets, monitoring stations, and technical pollutant measurements. The proposed system aims to provide a single dashboard that analyzes AQI data, highlights important pollutants and trends, identifies locations requiring attention, and presents actionable alerts in a simple visual format.

Solution

AQI Insight is a centralized air-quality monitoring dashboard that converts AQI and pollutant data into simple visual information. It displays the current AQI, major pollutant levels, historical trends, monitoring-station status, and alerts. Users can quickly understand air quality and identify areas or pollutants that require attention.

Target Users

User group	How the product helps
General public	Understand current AQI and pollution conditions quickly.
Students & researchers	Study historical AQI and pollutant trends.
Environmental authorities	Monitor stations and identify areas needing attention.
Public-health teams	Use AQI alerts to communicate pollution-related precautions.

Message

AQI Insight is a smart air-quality monitoring system that analyzes pollution data and displays AQI, pollutant levels, trends, and alerts through an easy-to-use dashboard.

Expected Dashboard
